

Amt solar container device is broken

Why is my solar combiner box not working?

Communication line interference: Verify that 120 termination resistance is connected to the appropriate communication bus terminal. Lightning is one of the main causes of failures in solar combiner boxes because of the jarring electric surge it causes. Check to see if the lightning protector's status feedback wiring is solid.

What if my modules are damaged on arrival?

If your modules are damaged on arrival, notify the driver immediately, notify carrier and LONGi staff within 24 hours of delivery, and provide a record with detailed information within 48 hours of delivery. See claims and warranties for full details. Always insert the fork from the short side of the pallet, as long as it is safe to do so.

Why are my PV array sections supplying different amounts of current?

PV array sections are supplying different amounts of current to each charge controller. Check the array section outputs and adjust for any differences. Consider that this could be a normal operating condition if the array sections are located in different locations and/or point in different directions.

Are solar combiner boxes Invincible?

Solar combiner boxes may not be invincible, but they are easy to fix if any error occurs. We hope you were able to understand the solar combiner box troubleshooting. To avoid repetitive errors from occurring, it is best to invest in affordable and superior quality solar combiner boxes.
