

# Beijing-tianjin-hebei solar container field analysis meeting

What is Beijing Tianjin & Hebei integrated development project?

The project aims to explore the potential for integrated development within this tri-region area. This initiative took on greater significance as the coordinated development of Beijing, Tianjin and Hebei ascended to the level of a national strategy in 2014, seven years after the project's commencement.

Is photovoltaic field development suitable in Beijing-Tianjin-Hebei region?

The assessment of photovoltaic field development suitability in the Beijing-Tianjin-Hebei region encompasses 34.52% of the total land area. In the evaluated region, the suitable areas encompass approximately 4.88 × 10<sup>4</sup> km<sup>2</sup>, accounting for approximately 62.56% of its total extent.

What is coordinated development of Beijing-Tianjin-Hebei region?

The Outline of Coordinated Development of Beijing-Tianjin-Hebei Region clearly points out that the coordinated development of Beijing-Tianjin-Hebei region is one of the three national development strategies in China<sup>5</sup> and the Beijing-Tianjin-Hebei region should take the initiative in energy upgrading and environmental protection.

Which areas are suitable for photovoltaic power plants in Beijing-Tianjin-Hebei region?

The Assessment of Key Areas for the Suitability of Photovoltaic Power Plants in the Beijing-Tianjin-Hebei Region The highly suitable areas exhibit Chengde City as having the largest area, while Baoding, Zhangjiakou, and Chengde are the primary distribution areas in the moderately suitable areas (Table 11).

How long does it take to travel from Beijing to Hebei?

Traveling less than 200 km from Beijing to a county in Hebei could take several hours. Additionally, the youth population dwindled in some of Hebei's counties has many moved to larger cities like Beijing for job opportunities. Ye has been focusing on promoting industrial synergy between Beijing, Tianjin and Hebei for their coordinated development.

Are there discrepancies between thermal power generation in Beijing-Tianjin-Hebei region?

With regard to the discrepancies existing among the thermal power generations in Beijing-Tianjin-Hebei region, specific policy recommendations for CO<sub>2</sub> emission abatement can be proposed as follows. Beijing's thermal power generation sector has approached the coal-free stage through energy structure upgrade.

Spatiotemporal dynamics and influencing factors of CO<sub>2</sub> emissions under regional collaboration: Evidence from the Beijing-Tianjin-Hebei region in China?

This division of growth stage helps to understand the evolution trends of CO<sub>2</sub> emissions in the
