

A notable feature of China's hydrogen strategy is that it is not, in fact, singular, but instead comprised of a national strategy and a multitude of regional strategies. Since the release of China's Medium and ...

China embarked last year on its biggest coal-power building boom in a decade, reinforcing the role of the dirtiest fossil fuel in its energy mix even as it aims to transition to renewables.

Abstract Solar energy is an inexhaustible clean energy, which can be converted into electricity through photovoltaic (PV) modules. However, the production of these modules is a process ...

It has formed a full-industrial-chain ecosystem covering renewable hydrogen production, green hydrogen replacement for coal chemical industry, and hydrogen storage, transport and ...

Regional disparity, coal classification, and the development of clean coal technologies are specified in the model. Based on MESSAGEix, this model takes full consideration of coal mining, ...

A bolder approach could let China phase down coal without causing power cuts, says Lauri Myllyvirta of the Centre for Research on Energy and Clean Air (crea), a think-tank in Finland.

Energy production in China is pitting renewables and coal against each other, while holding back advances in energy production, said a new analysis from the Centre for Research on ...

China energy group coal solar container
