Passive daytime radiative cooling (PDRC) technology has great potential in reducing cooling energy consumption. In order to further improve the spectral performance of PDRC coatings, ...

Principles Electric double-layer capacitors are based on the operating principle of the electric double-layer that is formed at the interface between activated charcoal and an electrolyte. The activated ...

Wen et al. have studied the enhancement of spectral absorption of  $\text{WO}_x$ - $\text{SiO}_2$  double-layer solar absorber coating by low vacuum pre-annealing, and found that the thermal stability of the ...

The double-layer pipe-embedded structure can be effectively integrated with a solar heating system, resulting in a significant increase in the temperature of the wallboard and indoors.

In this paper, we systematically investigate the structural, mechanical, optical and electronic properties of novel two-dimensional X Y (X = Al, Ga, In; Y = N, P, As) monolayers in the ...

In this work, we propose and demonstrate a highly scalable nanoparticle-based double-layer coating to achieve such selective radiative properties. Double-layer coatings consisting of a top ...
