Why do PV modules need to be protected from moisture & salty water?

Hence, modules must be protected from the presence of moisture and salty water surfaces. PV modules, which are mainly built for land-based systems, have metal, which can corrode more often for WPV system applications. Long operational life is key for any PV system, which can abate the overall cost of energy generation.

Are solar cells a viable energy source for underwater power generation?

One of the most promising demonstrated technologies for onboard underwater power generation is solar cells. Solar energy is a consistent source of energy above the ocean surface, but also a surprisingly abundant and consistent source of energy below the ocean surface.

Could solar cells be used to power underwater sensors and communication devices?

Although it may seem counterintuitive, solar cells could be used to power fixed underwater sensors and communication devices, and could be combined with other means of power generation, such as OTEC, to endow AUVs and ROUVs with long-range operation capabilities, and true autonomy for AUVs.

Can a PV cell be used underwater?

Finally, they concluded that over 50% efficiency is possible for underwater conditions while the cell has a band gap > 2.1 eV and depth vary between 4 and 20 m (Rohr et al., 2020). An indoor experiment was performed to evaluate the performance of underwater PV.

How efficient are GaInP-based underwater solar cells?

For example, the direct bandgap of GaInP can be tuned from 1.9 to around 2.7 eV (the indirect bandgap becomes prominent at 2.3 eV) through the incorporation of aluminium (Al) into the lattice (Fig. 2a,b) 25,26, thus it is likely that GaInP-based underwater solar cells can be developed that are even more efficient than those that currently exist.

What is a water based PV system?

Water-based PV (WPV) system includes floating PV in lakes or ponds (shallow water), underwater PV, offshore PV (deep water) and canal top PV. Installation of WPV systems saves agricultural, or urbanization land. Presence of the natural cooling from the water body also enhances PV performance.
