What is a hybrid car?

A drivetrain that sends power to all four wheels to improve traction. Many hybrid SUVs, such as the Toyota RAV4 Hybrid, include AWD as standard or optional. The rechargeable energy storage system that powers the electric motor in a hybrid. It is typically charged through regenerative braking. The gasoline-powered part of a hybrid vehicle.

What is a hybrid battery?

A widely used battery type in modern hybrids. It is known for being lightweight, energy-efficient, and long-lasting. A measure of fuel efficiency. Many hybrids deliver between 40 and 50 MPG or more depending on the vehicle and how it's driven. An older battery technology that is still used in some hybrids.

How does a hybrid car work?

A system that captures energy while the vehicle slows down and converts it into electricity to recharge the battery. It also helps reduce brake wear. A hybrid setup where only the electric motor powers the wheels. The gasoline engine works solely as a generator to produce electricity for the motor or recharge the battery.

What is a Toyota hybrid system?

Short for "electronic continuously variable transmission." This system smoothly adjusts the power output from the hybrid system to improve efficiency and performance. Toyota's proprietary hybrid technology. It blends gasoline and electric power for optimal performance and fuel savings.

What is a hybrid battery pack?

Another name for a hybrid's main battery pack. It stores the energy needed to power the electric motor. Short for "electronic continuously variable transmission." This system smoothly adjusts the power output from the hybrid system to improve efficiency and performance. Toyota's proprietary hybrid technology.

What is a hybrid motor?

The most common hybrid type. It uses both a gasoline engine and an electric motor but does not plug in to recharge. An electrical device that converts the battery's direct current (DC) into alternating current (AC) to power the motor. A unit of electrical power often used to describe the output of an electric motor or the capacity of a battery.
