

Today, energy generation from renewable energy sources is of great interest. Photovoltaic (PV) systems, in this regard, have much to offer, but they suffer from low efficiency, ...

To store thermal energy, sensible and latent heat storage materials are widely used. Latent heat TES systems using phase change material (PCM) are useful because of their ability to charge and ...

Phase change materials (PCMs) have emerged as a viable technology for thermal energy storage, particularly in solar energy applications, due to their ability to efficiently store and ...

Currently, there is great interest in producing thermal energy (heat) from renewable sources and storing this energy in a suitable system. The use of a latent heat storage (LHS) system ...

Latent heat TES utilizing phase-change materials (PCMs) is particularly advantageous because of its high energy-storage capacity with minimal changes in temperature and volume.

Abstract Phase change materials (PCM) are employed to store thermal energy in solar collectors, heat pumps, heat recovery, hot and cold storage. PCMs are encapsulated primarily in shell-and-tube, ...

Increasing the temperature of photovoltaic (PV) cells decreases their electricity generation. The use of phase change materials (PCMs) is one of the most common methods for ...

The potential for phase change materials (PCMs) has a vital role in thermal energy storage (TES) applications and energy management strategies. Nevertheless, these materials suffer ...

The results of the investigation revealed significant improvements in the performance of solar stills. Specifically, by incorporating PCM enhanced with 0.3 wt% Al₂O₃ and CuO ...

Solar energy is widely acknowledged as a renewable and environmentally friendly energy source. Efficient storage of heat energy is a crucial challenge in solar thermal applications. ...

phase change materials (PCMs), being of the latent heat storage category, are today widely used to store excess solar thermal energy in various temperature levels, depending on the ...

Phase change materials (PCM) are employed to store thermal energy in solar collectors, heat pumps, heat recovery, hot and cold storage. PCMs are encapsulated primarily in shell-and-tube, ...

Iranian phase change solar container materials

The main objective of the research is to perform a passive cooling for a photovoltaic (PV) module by using palm wax as a phase change material (PCM) when placed within a finned ...

This paper is an updated, but totally new, version of "A review on phase change materials (PCMs) integrated in building walls", an article published in 2011 in Renewable and ...

This study focuses on demonstrating the maturity of phase change materials and their integration into solar energy applications. Based on the findings, proposals for new research projects ...

Iranian phase change solar container materials
