

# Italian coal-to-electricity solar container project

Will Italy stop generating electricity from coal by 2025?

Italy is committed to stopping electricity generation from coal by the end of 2025 nationwide except in the island of Sardinia, the energy minister told parliament on Wednesday adding the government would boost gas-fired plants instead.

How many coal-fired power plants are there in Italy?

Currently, coal-fired generation in Italy consists of eight operating power plants, contributing to eight GW electrical generation capacity ( Figure 5 ). For coal-fired power plants, considering their stop of activity by the end of 2025, the gradual process of definitive shutdown of the groups has begun.

What role does coal play in Italy's energy mix?

Coal plays only a minor, and continuously declining, role in Italy's energy mix. It accounted for just under 4% of TES and 5% of electricity generation in 2021 and represented 7% of energy-related carbon dioxide (CO<sub>2</sub>) emissions in the same year. But all coal is imported and more than half of coal imports in 2021 came from Russia.

Is Italy ready for a phase-out of coal?

While Italy has opted to temporarily increase the use of coal in light of the current energy crisis, it remains committed to the phase-out target year. Given its geographical location, Italy has a strong resource base to replace some of its electricity from natural gas with renewable power generation capacity.

How much solar power does Italy need?

As a result, between 2014 and 2022, Italy added only 8.6 GW of new renewable capacity, of which solar PV accounted for 5.6 GW. While capacity additions have recently grown due to changes to the regulatory framework, Italy is far from installing 4 GW of new renewable capacity annually, which is needed to meet the targets set for 2030.

How much solar capacity does Italy need in 2022?

While capacity additions have recently grown due to changes to the regulatory framework, Italy is far from installing 4 GW of new renewable capacity annually, which is needed to meet the targets set for 2030. In 2022, Italy added 1.6 GW of new solar PV capacity and 0.5 GW of new wind capacity.

Italy 2023 Energy Policy Review INTERNATIONAL ENERGY AGENCY The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy ...

The technology captures CO<sub>2</sub> from the exhaust gases emitted by geothermal power plants via a chemical reaction and permanently stores it ...
