

It significantly undermines the sustainable development agenda. Therefore, assessing the possibility of leakage and the potential environmental damages becomes a primary task to ...

Abstract Pipeline leak detection is a critical component of modern energy infrastructure, playing a vital role in ensuring safety, operational efficiency, and environmental sustainability.

The experimental assessment carried out confirmed spontaneous ignition of the heat transfer fluid-soaked insulation material of the piping after leakage. The results of this study ...

Parabolic trough CSP is currently the most proven solar electricity production technology, which development started in the mid-1980s in California [4]. In parabolic trough CSP ...

The dangerous characteristics of hydrogen such as high diffusivity and wide flammability/explosion limit also increase the leakage risk of hydrogen blended natural gas. In this ...

ABSTRACT Developed in 2018-2019, NASA-STD-7012 Leak Test Requirements, has been drafted based mostly on the NASA technical requirement documents applicable to the International Space ...

The sustainability of our oceans is under severe threat. As the shipping industry implements changes to reduce the impact on the seas, eliminating oil emissions from propulsion systems is a viable initiative ...

The law of oil diffusion in porous soil is very important for the safety management of buried pipelines and the remedy of leakage accidents. This paper proposes a dynamic observation ...

In the process of establishing regulatory agencies, countries need to gradually enhance the capabilities of regulatory agencies to ensure their ability to fulfill their responsibilities in national nuclear power ...

In addition, water could also leak out from tanks and supply pipes due to the decayed infrastructure. To address these issues, researchers worldwide turned to the Internet-of-Things (IoT) ...

The reasons for the leakage of LNG filling equipment were analyzed, and the diffusion of LNG after different equivalent leakage hole diameters and different wind speeds were numerically ...

Mining area; Oil field exploration; Remote Telecommunication bases and Radar stations; Solar power containers can provide a stable and reliable power supply for mining equipment, lighting systems, ...

National development solar container oil leakage

There was a leakage in the container of the refined oil. If 11 kg oil is leaked out per day then it would have lasted for 50 days, if the leakage was 15 kg per day, then it would have lasted for ...

National development solar container oil leakage
