

How profitable is a photovoltaic installation?

In order to demonstrate the profitability of the photovoltaic installation, it was assumed that the average price of electricity (including electricity sales and distribution fee) in 2020 was 0.5622 PLN/kWh, and its year-on-year increase will be 3.5% [23, 35].

How does a photovoltaic system work?

Photovoltaic cells produce direct current, while home appliances and the power grid use alternating current. For this, an inverter is used that converts direct current into alternating current. The surplus of generated electricity goes to the power grid.

Why should we invest in photovoltaic panels?

There is the necessity to develop environmentally friendly technologies. Atmospheric conditions affect the electricity production by photovoltaic panels. The source of investment financing affects time of its return. PI and CCE are one of the investment profitability indicators.

What is the relationship between photovoltaics and heat pumps?

It should be emphasized that the cooperation of photovoltaics and heat pumps, aimed at ensuring thermal comfort in the building and generating electricity, e.g. for the operation of a heat pump, is one of the most economically advantageous technologies.
