

Solar container cable trench drainage

How do you cable a solar plant?

Solar plant developers have several options when cabling the arrays: Buried cable. Laying cable directly in the ground involves trenching and overcoming issues and delays caused by weather and hidden geological obstacles. Labor intensive and expensive, cable repairs are also costly and hindered by lack of visibility to an exact failure point.

Do you need trenching for a naked solar installation?

When providing trenching for a Naked Solar installation, there are certain standards and regulations to adhere to. We recommend engaging the services of a groundworks company to carry out your trenching needs. Naked Solar kindly requests customers to arrange their own trenching as we are unable to provide this service.

Can I arrange my own trenching?

Naked Solar kindly requests customers to arrange their own trenching as we are unable to provide this service. We always use armoured (SWA) or duct-grade cable when putting cable in a trench. For this, there are recommendations for underground cable runs, as per the regulation clauses below.

Why do solar plants need a snake tray?

That can get expensive as there are many turns, transitions, and connections to reach the inverters at the end of every row - and even more cost prohibitive if it involves trenching and derating buried or bundled cables. Snake Tray solutions make battery storage more efficient and profitable for solar plants.

How does a free-air solar cable conveyance system help utility-grade solar plants?

This article explains how the free-air solar cable conveyance system by Snake Tray, the Solar Snake Max (TM), helps utility-grade solar plants squeeze the most wattage out of every dollar spent on labor and materials to improve profitability.

How do solar plants save money?

Saving money on materials is accomplished by using lower ampacity cables to their full capacity in free air rather than having to purchase thicker cables to compensate for the effects of derate. Solar plants can save up to 30% on cable costs alone!
