

How do you calculate the power of an inverter?

Required power :  $PLR = W \cdot V_{max}$  [kW] 6120 · ? 9550 · Load torque :  $TLR = PLR$  [N·m]  $N_{max}$  Select the inverter capacity that is equivalent to the motor capacity. If higher acceleration torque is required, select the inverter capacity, which is higher than the motor capacity.

How do I select a motor capacity?

(Appendix). Select a motor capacity (tentative) based on the required power obtained in the last section. Select a motor capacity that is equal to or higher than the required power in typical operations. Example: When the required power  $PLR=2.8$  [kW] and  $k_p=1.0$  Tentatively select the motor capacity 3.7kW, which is the closest to the required power.

How do I select the inverter capacity?

When selecting, also check that the rated motor torque is equal to or higher than the load torque. Select the inverter capacity that is equivalent to the motor capacity. If higher acceleration torque is required, select the inverter capacity, which is higher than the motor capacity.

How do I choose a rated motor capacity?

Calculate the required power and the load torque, and select a motor capacity that can be driven by the required power or higher. When selecting, also check that the rated motor torque is equal to or higher than the load torque. Select the inverter capacity that is equivalent to the motor capacity.

How to calculate servo motor capacity?

$2 T 4 \cdot t 4 t 1 + t 2 + t 3 + t 4$  Please make use of the Servo Motor selection software, which can calculate the motor shaft conversion inertia and effective/maximum torque, as above. Use the formula below to calculate the motor capacity from the effective torque and the maximum torque that were obtained above.

How to calculate solar panel capacity?

The required capacity of the solar panel may be determined by the following ratio:  $P_{sp} = P_{mb} / \eta_1 = P_l / \eta_1 + P_{ch} / (\eta_1 \eta_2)$ . (18) Here,  $\eta_1$  is the buck DC/DC pulse converter efficiency. The amount of electricity produced by a solar panel depends on weather conditions.
