

Dynamic Reactive Compensation - LV STATCOM Providing stability, security, and reliability to the grid. Installing a STATCOM at one or more suitable points on the network is a powerful and cost effective ...

The Static synchronous compensator (STATCOM) is a renowned FACTS (flexible alternating current transmission system) device used in power grids to cope with protean conditions. This article ...

A STATCOM is a dynamic voltage regulating device. It is based on a power electronics voltage-source converter and can act as a source or sink of reactive power (volt-ampere reactive (VAr)). It ...

Improve operational performance and lower energy costs - VArPro™ STATCOM With over a GigaVAr of STATCOM installations worldwide, ABB is a pioneer and a leader in reactive power compensation ...

Abstract--The paper focuses on an efficient method to compensate the harmonics and zero-sequence component caused by the variable unbalanced nonlinear loads. The studied compensator is based ...
