Are solar-powered electric vehicle charging stations a novel approach to sustainable transportation?

3. Study area

What is a solar charging station?

This research project focuses on the development of a Solar Charging Station (SCS) tailored specifically for EVs. The primary objective is to design an efficient and environmentally sustainable charging system that utilizes solar energy as its primary power source. The SCS integrates state-of-the-art photovoltaic panels, energy storage systems, and smart charging technology.

How much space is needed to build an electric vehicle charging station?

Also, in this research, it is assumed that there are 4 chargers in each charging station, so 100 square meters of space is required to build an electric vehicle charging station.

Are solar-powered electric vehicle charging stations a novel approach to sustainable transportation?

We confirm that the manuscript entitled "Systematic Site Selection Solar-Powered Electric Vehicle Charging Stations: A Novel Approach to Sustainable Transportation", it has been absolutely our main work. It implies Energy Strategy Reviews that were not previously published.

How do Solar-supplied electric vehicle charging stations (EVCs) location selection studies work?

Given this background, this study developed an approach for Solar-supplied Electric Vehicle Charging Station (EVCS) location selection by combining EVCS and solar farm site selection studies using Geographical Information System (GIS) and Analytic Hierarchy Process (AHP).

Are solar charging stations suitable for EVs?

However, the widespread adoption of EVs is still hindered by limited charging infrastructure and concerns about the environmental impact of electricity generation. This research project focuses on the development of a Solar Charging Station (SCS) tailored specifically for EVs.

Where to build a solar charging station?

In these areas, maximum power demand (recharging stations) can be met through solar system. Most of the areas suitable for the construction of charging stations are nearly all in the central and western parts of the island.
