

Why don't cars use mobiles to store energy

4 Why do we use capacitors when batteries can very well store charges? There's an important point that, so far, I don't see in other answers. Neither of these devices store charge! A ...

From my understanding, turbines generate electricity by rotating. Why can't we just attach some kind of generator to car wheels to generate electricity since they'll be spinning really fast anyway? And maybe ...

The wheels don't produce energy, they are powered by electric motors that get their energy from the car's battery. If you stick a dynamo on one of these wheels, the dynamo it will start producing ...

Especially in the case of energy produced by photovoltaics, much is lost if it cannot be used immediately and also cannot be stored. Now, after more than a decade of discussion, a possible solution for ...

I've done a lot of work on heavy industrial vehicles, many of which use the above system. I understand the benefits of smoothness, more torque, more flexibility in layout than a conventional gearbox etc ...

Why don't more cars use CNG? It was easier to use liquid fuels in the past, and so we stuck with them. Spark-ignition engines can actually run fine (ish) on CNG with minimal changes (all you do is allow ...

Discover the potential and limitations of using electric vehicles as energy storage for your home. Learn about safety considerations, practical applications, and alternative solutions.

Lithium-ion batteries have higher voltage than other types of batteries, meaning they can store more energy and discharge more power for high-energy uses like driving a car at high ...

A car-sized battery can store about ten thousand times more energy than just lifting the car over your head. So instead of running those bulbs for an hour, it could run those bulbs for a year.

When you think of electric cars, you probably imagine sleek vehicles silently zipping past gas stations. But here's the kicker: what if your car could do more than just move you around? ...

We uncover and examine the recent movements in different energy storage technology advancement by searching articles related to electrochemical, chemical energy storages, electrical ...

This is kind of like asking why you can't use a wind turbine generator to power a fan which blows onto the wind turbine. It's just an energy loop. The electric car is using energy to turn the wheels. Any ...
