

How do I use rworldmap legend?

For simple use, simply use `addLegend=TRUE` in a `rworldmap` map function. Or users can call `addMapLegend` separately to fine tune the legend. The user should insure that `data`, `catMethod`, `numCats` and `colourPalette` match the values used in the plot. The legend is designed to be useful for the variety of classification methods that exist.

How are the different country boundaries in rworldmap processed?

The different country boundaries in `rworldmap` are processed from Natural Earth Data as follows : All : ~ rename any non-ASCII country names that cause R trouble ~ rename Curacao which is particularly troublesome ! 'SpatialPolygonsDataFrame' [package &quot;sp&quot;] object containing a simplified world map.

How do I create a vignette using rworldmap?

Type `vignette('rworldmap')` to access a short document showing a few examples of the main `rworldmap` functions to get you started. Creates a colour bar legend, showing the range of colours and the values the colours correspond to. Relies heavily on `image.plot()` from the `fields` package.
